during the era of navigation and exploration

Arabian Peninsula, the Persian Gulf, and the Gulf of Oman.

The Arabian Peninsula is characterized by a dry, arid climate, with

a high temperature and low humidity. The peninsula is divided into

three main regions: the Western Desert, the Eastern Desert, and

the Omani Desert. The Western Desert is the most extensive, with

an area of about 1.3 million square kilometers, while the Eastern

Desert is the smallest, with an area of about 0.5 million square

kilometers. The Omani Desert is located in the northwestern part

of the peninsula, with an area of about 0.6 million square

kilometers.

The climate of the Arabian Peninsula is characterized by dry

and arid conditions, with low humidity and high temperatures.

The average annual temperature is around 25°C, with highs of

up to 45°C during the summer months. The annual rainfall is

very low, with most areas receiving less than 50 millimeters.

The main economic activities in the Arabian Peninsula are

agriculture, fishing, and tourism. The region is rich in

natural resources, including oil, gas, and minerals.

The Arabian Peninsula is also home to a diverse array of

cultural and historical sites. The region has a rich

heritage, with many ancient and medieval sites,

including the UNESCO World Heritage Sites of

the UNESCO World Heritage Sites of

Al-Qasr and Al-Hamra.
